Education:

Ph.D. Inorganic Chemistry; Northwestern University, June 1996

M.S. Chemistry; Northwestern University, December 1992

B.S. Chemistry; Harvey Mudd College, May 1991

Research Experience:

William Bryan Professor of Materials Engineering (2011-present) **Associate Professor** (2007 – 2011) **Assistant Professor** (2001-2007): “Functional Materials at the Nano-Scale” University of Kentucky, 2001-Present. Primary faculty appointment in Materials Engineering Program, Dept. of Chemical and Materials Engineering. Joint-Appointment Dept. of Chemistry July 1 2003-present. Assisting Director of the Center for Nanoscale Science and Engineering.

Post-Doctoral Fellowship Research: “Charge Storage Mechanism in Nano-Crystalline Si Based Single-Electron Memories” JSPS/NSF Research Fellowship, Tokyo Institute of Technology, 1998-2001. Host Professor: Shunri Oda.

Post-Doctoral Research: “Si/SiO₂ Interface Stability and Optimization.” Department of Physics, North Carolina State University, 1996-1998. Host Professor: Gerald Lucovsky.

Graduate Research Thesis: “Ti-Ba-Ca-Cu-O Thin Films for Superconducting Electronics: Precursor Performance, Deposition Mechanism, Phase Formation, and Trilayer Structures by Metal-Organic Chemical Vapor Deposition.” Northwestern University, 1991-1996. Ph.D. Advisor: Tobin Marks.

Undergraduate Research Thesis Project: “Kinetic Studies of Ester Hydrolysis at Transition Metal Centers within Perfluorosulfonate Films.” Harvey Mudd College, 1990-1991. Advisor: Hal VanRyswyk.

Awards and Honors:

Kavli Frontiers of Science Fellow, National Academy of Science 2010

Elected vice-chair Gordon Conference ‘Membranes: Materials & Processes 2012’, Chair 2014

Presidential Early Career Award (PECASE, NIH) 2009

NSF Early Career Award, 2004

Japanese Society for the Promotion of Science (JSPS) Post-Doctoral Fellowship Award, 1998

Submitted publications:

65. 'Low Voltage Electroporation of endothelial cells using thin film electrodes in nanoporous alumina membranes' X. Sun Z.W. Johnson, P. Hoblitzell, WL Mercke, K.W. Anderson, B.J Hinds* *J. Biomaterials Applications* submitted April. 2012
64. 'Fouling Characteristics and Electrochemical Recovery of Carbon Nanotube Membranes' X. Sun*, Ji Wu, Z. Chen, X. Su and B.J. Hinds ACS Nano submitted March 2012
63. 'Programmable Transdermal Clonidine Delivery through Voltage Gated Carbon Nanotube Membranes Clonidine' " C.L. Strasinger, J. Wu, K.S. Paudel, Nichole Scheff, D. Hamell, Raghotham R. Pinninti, B. J. Hinds*, Audra L. Stinchcomb* *J. Controlled Release*, revision submitted Feb. 2012.

Citation data (as of 1/19/12)

Career (1992-present):

1740 citations (1621 non-self), H-index 20

At Univ. of Kentucky July 2001-present:

1085 citations, (1007 non-self), H-index 11

Funded Research Activity:

Approximately \$4.7M for Hinds' lab attributed activities of \$16.4M total with collaborations

As PI

“Molecular Transporters” DARPA 6/1/09-02/17/12 \$688,000 (82%, co-I Lin UNC-CH)

“R01: Gated Carbon Nanotube Membrane Transdermal Drug Delivery” NIH (co-I Stinchomb) 7/1/06-6/31/11; PECASE award extension 7/1/11-1/31/15 (sole PI, 100%)

“Aligned Carbon Nanotube Membranes for Forward Osmosis Power Generation” Statkraft Corp., Norway 7/1/08-6/31/12 concluded

“CAREER: Aligned Carbon Nanotube Composite Array as Permeable Membrane” NSF, 4/1/04-9/30/10 Concluded

“Controlled Growth of Single-Walled Carbon Nanotubes for a Scalable Sub-Nanometer Lithography Process with Applications Towards Molecular Quantum Cryptology” AFOSR, sole-PI 04/01/02 - 03/31/06 Concluded

“Synthetic Route for Carbon Nanotube Based Permeable Membrane” Kentucky Science and Engineering Foundation sole PI B.J. Hinds 04/01/02-12/31/02 Concluded.

As co-PI

IDC- calculated from % share of IDC incentive distribution

#PIs- for instrument or large infrastructure % calculated from total number of PI/co-PI

“Advanced Materials Relating to Applications in Epitaxial Thin Films and Device Structures” NSF EPSCoR subcontract of ‘EPSCoR RII: Transforming Kentucky's New Economy’ (P.I. G. Cao, 5 co-I) 9/1/08-8/31/13 (UK portion) (17% #PIs)

“IGERT: Building Interdisciplinary Leadership Through a Program on Engineered Bioactive Interfaces and Devices” NSF (co-PI Hinds, PI Kim Anderson, 14 faculty participants) 7/01/07-6/30/11 (6.3% #PIs)

“DOE EPSCoR: Nanoscale Materials and Architectures for Energy Conversion” DOE (3 co-PI, PI Steve Rankin) 7/01/07-6/30/09 (25% #PIs)

“NIRT: Novel One-Dimensional Horizontally Aligned Array of Nanopores: Nanoscale Fabrication for Molecular and Electronic Devices” NSF (3 co-PI, PI Zhi Chen) 7/1/06-6/31/11 (20% IDC)

“Advanced Carbon Nanotechnology Consortium” ARO (P.I. J. Davidson, Vanderbilt \$22M (4 universities, co-PI Janet Lump (7 UK investigators) \$5M for UK) 1/1/03- 4/31/09 subcontract to B. J. Hinds (50% subcontract) Concluded

“Kentucky Partnership for Nanoscale Electronics and Biotechnology” NSF EPSCoR (P.I. Z. Chen, one of 15 co-I) 7/1/05-6/31/08 (6.7% #PIs) Concluded

“Integrated Material Architectures: From Nanoscale Studies to Microdevice Development” DOE EPSCoR (PI K. Walsh Univ. of Louisville) 7/1/03-6/31/06 subcontract to B.J. Hinds Concluded

“Nano-Scale Engineering Education for Undergraduates” NSF Nanoscale Science and Engineering Centers (4 co-PI, PI M.P. Meguc) 06/01/03-05/31/04 (20% IDC) Concluded

- “Stability, Dynamics and Switching of Magnetic Nanostructures” Kentucky Science and Engineering Foundation (1 co-PI. PI L. DeLong) 06/01/03-5/31/05 (40% IDC) Concluded
- “Investigation of the Stability and Dynamics of Nanoscale Magnetic Order with Superconducting Probes” DOE (1 co-PI. PI Lance DeLong) 4/1/04-3/31/04 (15% IDC) Concluded
- ‘A Novel Method for Fabrication and Characterization of Nano-Scale Heterojunctions’ Kentucky Science and Engineering Foundation (3 co-PIs. PI V.J. Singh) 06/01/03-5/31/05 (12.5% IDC) Concl.
- “MRI Acquisition of Instrumentation for Thermal Characterization of Materials” NSF Major Research Equip. Prog. (4 co-PIs. PI John Selegue) 06/01/03-5/31/05 (20% #PIs) Concluded

Publications continued

From previous research activities outside of UKY:

30. “Emission Lifetime of Polarizable Charge Stored in Nano-Crystalline Si Based Single-Electron Memory” Bruce J. Hinds, Takayuki Yamanaka and Shunri Oda. *J. Appl. Phys.* **2001**, 90(12) 6402-6408.
29. “Two-Gate Transistor for the Study of Si/SiO₂ Interface in SOI Nano-Channel and Nanocrystalline Si Memory Device” Hinds, B.J.; Nishiguchi, K.; Dutta, A.; Yamanaka, T.; Hatanani, S.; Oda, S.; *Jap. J. Appl. Phys.* **2000**, 39(7B), 4637-4641.
28. “Room Temperature Single-Electron Narrow-Channel Memory with Silicon Nanodots Embedded in SiO₂ Matrix” Yun, F.; Hinds, B.J.; Hatatani, S.; Oda, S.; *Jap. J. Appl. Phys.* **2000**, 39(8A), L792-795.
27. “Study of Structural and Optical Properties of Nanocrystalline Silicon Embedded in SiO₂” Yun, F.; Hinds, B.J.; Hatatani, S.; Oda, S.; Zhao, Q.X.; and Willander, M.; *Thin Solid Films* **2000** 375(1-2) 137-141.
26. “Investigation of Postoxidation Thermal Treatments of Si/SiO₂ in Relationship to the Kinetics of Amorphous Si Suboxide Decomposition” Hinds, B.J.; Wang, F.; Wolfe, D.M.; Hinkle, C.L.; Lucovsky G.; *J. Vac. Sci. Technol. B* **1998**, 16(4), 2171.
25. “Study of SiO_x Decomposition Kinetics and Formation of Si Nanocrystals in a SiO₂ Matrix” Hinds, B.J.; Wang, F.; Wolfe, D.M.; Hinkle, C.L.; Lucovsky, G.; *J. Non-Crystalline Solids* **1998**, 227-230(1), 507.
24. “Minimization of Suboxide Transition Regions at Si-SiO₂ Interfaces by 900°C Rapid Thermal Annealing” Lucovsky, G.; Banerjee, A.; Hinds, B.; Claflin, B.; Koh, K.; Yang, H.; *J. Vac. Sci. Technol. B* **1997**, 15(4), 1074.
23. “New Approach to Preparing Smooth Si(100) Surfaces: Characterization by Spectroellipsometry and Validation of Si/SiO₂ Interfaces Properties in Metal-Oxide-Semiconductor Devices” Schmidt, D.; Niimi, H.; Hinds, B.J.; Aspnes, D.E.; Lucovsky, G.; *J. Vac. Sci. Technol. B* **1996**, 14(4), 2812.
22. “Thin Films for Superconducting Electronics. Precursor Performance Issues, Deposition Mechanisms, and Superconducting Phase Formation-Processing Strategies in the Growth of Tl₂Ba₂Ca₁Cu₂O₈ Films by Metal Organic Chemical Vapor Deposition” Hinds, B. J.; McNealy, R.J.; Studebaker, D.B.; Marks, T.J.; Hogan T.P.; Schindler, J.L.; Kannewurf, C.R.; Zhang, X.F.; Miller. D.J. *J. Mater. Res.* **1997**, 12(5), 1214.
21. “MOCVD Routes to Tl-2212/MgO/Tl-2212 Trilayers. Preliminary Observations On Growth and Microstructural/Electrical Properties.” Hinds, B.J.; McNeely, R.J.; Chen, J.; Dias, C.; Studebaker, D.B.; Marks, T.J.; Hogan, T.P.; Schindler, J.L.; Kannewurf, C.R.; *J. Alloys and Compounds.* **1997**, 351, 328.

20. "Efficient Route to $TlBa_2Ca_2Cu_3O_{9+x}$ Thin Films by Metal-Organic Chemical Vapor Deposition Using TIF as a Thallination Source" McNeely, R.J.; Belot, J.A.; Hinds, B.J.; Marks, T.J.; Schindler, J.L.; Chudzik, M.P.; Kannewurf, C.R.; Zhang, X.F.; Miller, D.J.; *Appl. Phys. Lett.* **1997**, 71(9), 1243.
19. "MOCVD Routes to $Tl_2Ba_2Ca_{n-1}Cu_nO_{4+2n}$ Superconductor and Dielectric Insulator Thin Films" Hinds, B.J.; Studebaker, D.B.; Chen, J.; McNeely, R.J.; Han, B.; Schindler, J.L.; Hogan T.P.; Kannewurf, C.R.; Marks, T.J.; *J. de Physique IV*, **1995**, C5, C391.
18. "Metal-Organic Chemical Vapor Deposition/Open Flow Thallium Annealing Route to Epitaxial $Tl_2Ba_2Ca_2Cu_3O_{10}$ Thin Films" Hinds, B.J.; Schultz, D.L.; Nuemayer, D.A.; Han, B.; Marks T.J.; Wang, Y.Y.; Dravid, V.P.; Schindler, J.L.; Hogan T.P.; Kannewurf, C.R.; *Appl. Phys. Lett* **1994**, 65(2), 213.
17. "Metal-Organic Chemical Deposition Route to Epitaxial $Tl_2Ba_2Ca_2Cu_3O_{10}$ Thin Films" Hinds, B.J.; Marks T.J. Contribution in Glocker, D.A.; Shah, S.I., Ed. *Handbook of Thin Film Process Technology*, IOP Publishing Inc.: Philadelphia PA. **1996**.
16. "New Precursors for Barium MOCVD. β -Ketoiminate Complexes Containing Appended Polyether "Lariats" Schulz, D.L.; Hinds, B.J.; Stern, C.L.; Marks, T.J.; *Inorg. Chem.* **1993**, 32, 249.
15. "New Structural Aspects of $Tl_2Ba_2Ca_1Cu_2O_y$ Epitaxial Thin Films Grown by MOCVD on $LaAlO_3$ " Zhang, X.F.; Sung, Y.S.; Miller, D.J.; Hinds, B.J.; McNeely, R.J.; Studebaker, D.L.; Marks, T.J.; *Physica C*, **1997**, 275, 146.
14. "Volatility by Design. Synthesis and Characterization of Polyether Adducts of Bis(1,1,1,5,5,5-hexafluoro-2,4, pentanedionato)barium and Their Implementation as Metal-Organic Chemical Vapor Deposited Precursors" Belot, J.A.; Nuemayer, D.A.; Reedy, C.J.; Studebaker, D.B.; Hinds, B.J.; Stern, C.L.; Marks, T.J.; *Chem Mater.* **1997**, 9, 1638.

“Metal-organic Chemical Vapor Deposition of Epitaxial Tl₂Ba₂Ca₂Cu₃O₁₀ Thin Films” *Oral presented* at Materials Research Society Fall Meeting, Boston MA, November 1993.

Graduate Student Advising

Nitin Chopra MSE Ph.D. Aug 2005. 'Controlled carbon nanotube growth for high-throughput sub-nanometer lithography process'. (**Assist Professor U. AL Tuscaloosa**)

Mainak Majumder MSE Ph.D. September 2007 'Chemical modification and transport characterization of carbon nanotube membranes' (Post-doc Rice University Chem E, **Assist Professor/Lecturer Monash University, Australia**)

Pawan Tyagi MSE Ph.D. April 2008 'Characterization of electron spin transport through extended pi-bond coordination compounds systems' (Post-doc John Hopkins Chem E)

Bryan Gall MSE M.S. Aug 2005 'Angstrom level control of Au growth on atomically flat substrates for molecular electronics' (Intel, Pheonix Az)

Dinesh Kalyanasudaram MSE M.S. May 2007 'Multilayer magnetic thin film stuctures for spin-electronic devices' (Seagate, Minneapolis MN)

Current students

Bing Hu MSE Ph.D. **Expected** Apr. 2011 'Controlled growth nanowires for molecular electronics'

Xin Zang CHEM Ph.D. **Expected** May. 2011 'Chiral catalysis and separation on aligned CNT membrane'

Xin Su MSE MSE Ph.D. **Expected** Sept. 2011 'Electrochemical transformations and separations with aligned CNT membrane'

Karen Gerstand MSE Ph.D. **Expected** Dec. 2011 'Ion exclusion and forward osmotic power generation from CNT membranes'

Jingyuan Yao MSE Ph.D. **Expected** Aug. 2012 'Multilayer membrane structures for sequential catalysis and DNA sequencing'

Zhi-Qiang Chen MSE Ph.D. **Expected** Dec. 2014 'Chiral separations with CNT membranes'

Johnathan Wagner BioChem Ph.D **Expected** Aug. 2012 (biochemistry, IGERT co-advised student) 'Enzyme encapsulation and protection for therapeutic use'

Post-doctoral

Jacob Goldsmith '10-present (U Mich. PD

Ji Wu June '07 – present (Faculty position, Univ. Southern GA)

Jinghua Sun Sept '08 – '11 (UoL staff)

Jing Chen Jan-Feb '09 (UoL Med Center)

Karin Keis, Nov. '06 – June '07 (Seattle)

Undergraduate Research Experiences (summer or semester)

Zach Johnson (10), Daniel Bacon-Brown ('10), Patrick Hobitzel ('09), Joseph Alexander ('07), Corey Meadows ('06), Jeggan Cole* ('06), J.T. Zellers ('05), Wendy Satterwhite('05), Tochukwu George *('02, '03), Anya Jaromczyk ('03), Jim McCarthy ('02), Charles Bynaker ('02),

High School research experience: Mia Williams* '05 (Dunbar), Orsolya Hegyi '10 (Dunbar)

* minority students

Course summaries:

EGR101 (Engineering Professions) is an introductory classes designed to help expose students to various disciplines of study available at UKY. For EGR101 my responsibility is to present one lecture of an introduction to Materials Science and Engineering and laboratory experience.

MSE 101 (Materials Engineering Professions) is designed to introduce freshmen engineering majors to the field of Materials Engineering. Fundamental concepts of atomic structure, the fact that defects dictate the strength of materials and quantitative measures of stress-strain are introduced. Professional ethics is taught in the forms of examples of plagiarism, engineering case studies, and business dilemmas.

MSE 301 (Materials Properties) is the second semester course of a year long introduction to Materials Science and Engineering. More advanced concepts of mechanics, defects, and processing are developed. Particular weaknesses in past student performance in phase diagrams and crystallography are strongly reinforced.

MSE402G (Electronic Materials and Processing, with lab, 4 units) is designed to give Junior/Senior undergraduates an in depth knowledge of electronic materials. This is one of the key courses to provide working knowledge in the 4 primary areas of metallurgy, polymers, ceramics, and electronic materials. The course begins with solid state physics, progresses to electronic device (transistor, laser etc.) design and operation, and ends with processing fundamentals. A particular departure from previous approaches has been to make this class content accessible to non-materials majors. During the spring semester half the class attendance was Chemistry graduate students with electronics related research projects. This class is now able to help any undergraduate engineering student with an interest in electronic materials/or processing. It is now a recommended elective for the Chemical Engineering program due to the many career opportunities in the area. A new 1-unit electronics fabrication lab has been developed to give undergraduate and graduate students hands on experience. This lab addition (as well as in 401G and 402G) was an important part of our response to ABET cited weaknesses in laboratory experience in the undergraduate curriculum. www.engr.uky.edu/bjhinds/402g/

MSE585 (Materials Characterization with lab, 4 units) is designed for Senior undergraduates and 1st year graduate students to learn the most powerful materials characterization techniques: x-ray diffraction, electron microscopy, and surface analysis. This is particularly critical for current research efforts in the nano-scale manipulation of matter with an emphasis on surface functionalization. In recognition of this, the course has recently been added as a mandatory requirement of the materials program curriculum. It is also a recommended elective of the Chemical Eng. program. Also this course is a key part of the proposed NSF 'Nano-Scale Engineering Education for Undergraduates' certificate program at UK, since characterization of nano-scale systems requires these tools. This course was also a critical part of our response to ABET cited weaknesses in laboratory experience in the undergraduate curriculum. Laboratory experiments had to be redesigned for a lower level of TA support and most efficient use of the TEM facility. This course was taught in conjunction with Univ. of Louisville Chem. Eng. Dept through iTV and a trip to use our TEM facility.

MSE599 (Micro/Nanofabrication Laboratory) is a hands on lab for electronic and nanofabrication designed for Senior undergraduates and graduate students. It covers the principles and use of evaporation, sputtering, chemical vapor deposition, photolithography, reactive ion etching and thin film characterization techniques. It is a 1 unit course with alternating lecture and lab weeks. This course strongly coincides with the lab section of MSE402G.

MSE632 (Adv. Materials: nanotechnology) is a course that focuses on the learning of topics related to the synthesis and properties of nano-scale materials. Synthetic approaches will be related to fundamental surface science, nucleation and growth mechanism and thermodynamics. Chemical activity, electronic and mechanical properties of nanomaterial systems will be studied. Specific materials systems that result in nano-structured materials as well as a variety of nano-fabrication techniques are surveyed and analyzed. Another critical goal of the course is to demonstrate the process of in-depth learning of a current research topic from the relatively shallow introductory text commonly found in emerging topic areas. This is accomplished utilizing literature sources from numerous in-class activities and analysis projects.

MSE632 (Adv. Materials: Structure of Materials) is a course that focuses on Solid State Physics (Kittel's common text). The emphasis is on crystal structures, nature of bonding, phonons, wavefunction solutions and interaction with periodic boundaries, use of band diagrams, conductance and optical processes, and surface/interface characterization.

Meetings and workshop organization.

Elected Vice Chair, Gordon Conference on 'Membranes: Materials & Processes 2012'

Discussion Leader, 'Super-Permeability Membranes' Gordon Conference on 'Membranes: Materials & Processes 2010

Session Chair 'Oxide Thin Films' TMS Electronic Materials Conference 2010

Program Chair 'Microfluidics' International Conf. on Electron, Ion, and Photon Beam Technology and Nanofabrication 2010

'Workshop: Emerging Membrane Materials and Manufacturing methods' North American Membrane Society, July 18, 2010 (highest paid attendance of offered workshops)

'Aligned Carbon nanotubes: flow enhancement and gatekeeper activity' European Membrane Society Meeting, Mount Pellier Fr. Sept. 1-10, 2009 (keynote talk, emerging membrane materials workshop, young investigator workshop)

'Workshop: Emerging Membrane Materials and Manufacturing methods' Int. Congress on Membranes, Honolulu HI, July 13-18 2008 (highest paid attendance of offered workshops)

Presiding session chair 'Advanced Membranes for Energy and Environmental Applications' ACS Fall National meeting 2006

Session chair 'Hybrid Materials for Membranes' 9th International Conference on Inorganic Membranes 2006

IEEE nano 2006 program committee

Vice-chair 'Session 08e13. Advances in Nanolithography' AIChE National Meeting 2005

Vice-chair 'Session 03019. Nano-particle based devices' AIChE National Meeting 2005

University and Public Service

University committee activities

Co-Director NSF-IGERT on Engineered Bioactive Interfaces and Devices
Assisting director for Center for Nanoscale Science and Engineering (CeNSE)
fabrication facility.
Joint appointment with the Department of Chemistry.
Faculty co-advisor Materials Research Society Student Chapter
Member CME chair faculty search committees.
Member of Materials Program graduate student committee.
Member CME space and safety committee.

Student recruitment

Mentored 11 undergraduates for summer research. .
Member, E-day continuing committee for Materials Program, annual participant

Short courses, extension activities

'Workshop: Emerging Membrane Materials and Manufacturing methods' North American Membrane Society, July 18, 2010 (highest paid attendance of offered workshops)
'Aligned Carbon nanotubes: flow enhancement and gatekeeper activity' European Membrane Society Meeting, Mount Pellier Fr. Sept. 1-10, 2009 (keynote talk, emerging membrane materials workshop, young investigator workshop)
'Workshop: Emerging Membrane Materials and Manufacturing methods' Int. Congress on Membranes, Honolulu HI, July 13-18 2008 (highest paid attendance of offered workshops)
Microfabrication laboratory Shortcourse work shop for minority program 2008 (CeNSE)
Science Fair Judge, semi finals State Science Fair, Kentucky Academy of Sciences 2008; Science Fair Judge Dixie Elementary, Lexington Kentucky, 2007;
Helped team teach (one 2hr lecture) a short course on for local chapter of American Society of Metallurgy (ASM) 2002,2003, and 2004 and will continue in 2005.
Helped team teach (Lecture on 'Molecular Electronics and Nano-fabrication') for REU program's nano-technology short course.
Helped with Fundamentals of Engineering (FE). Exam study session for Chemistry section.
Science fair consultant Julius Marks elementary school, Oct. 2004
