Contents Overview

Part I. BACKGROUND MATERIAL

- Chapter 1. Introduction
- Chapter 2. Mathematical Tools: Elements of Probability Theory
- Chapter 3. Mathematical Modeling of Production Systems

Part II. SERIAL PRODUCTION LINES WITH BERNOULLI MACHINES

- Chapter 4. Analysis of Bernoulli Lines
- Chapter 5. Continuous Improvement of Bernoulli Lines
- Chapter 6. Design of Lean Bernoulli Lines
- Chapter 7. Customer Demand Satisfaction in Bernoulli Lines
- Chapter 8. Transient Behavior of Bernoulli Lines
- Chapter 9. Closed Bernoulli Lines
- Chapter 10. Auxiliary Problems

Part III. SERIAL PRODUCTION LINES WITH EXPONENTIAL AND GENERAL MACHINES

- Chapter 11. Analysis of Exponential Lines
- Chapter 12. Analysis of General Lines
- Chapter 13. Continuous Improvement of Exponential and General Lines
- Chapter 14. Design of Lean Exponential and General Lines
- Chapter 15. Customer Demand Satisfaction in Exponential and General Lines
- Chapter 16. Transient Behavior of Exponential and General Lines
- Chapter 17. Auxiliary Problems

Part IV. ASSEMBLY SYSTEMS

Chapter 18. Analysis of Bernoulli Assembly Systems

Chapter 19. Analysis of Exponential and General Assembly Systems

Chapter 20. Continuous Improvement of Assembly Systems

Chapter 21. Design of Lean Assembly Systems

Chapter 22. Customer Demand Satisfaction in Assembly Systems

Chapter 23. Transient Behavior of Assembly Systems

Chapter 24. Auxiliary Problems

Part V. APPENDICES AND SOFTWARE

Chapter 25. Overview of Fundamental Laws of Production Systems Engineering

Chapter 26. Proofs and Software for Part II

Chapter 27. Proofs and Software for Part III

Chapter 28. Proofs and Software for Part IV
