

TASK 3: GATHER INFORMATION ON LIKELY PROJECTS

Due Tuesday, 2-8-05

LGH 2-1-05

Objective(s): This task will expose the students to the different aspects of assembling an engineering project so that they will have a better grasp on what the project entails.

It is time to define your intended project. This means that you will have to gather information on:

- specific application, i.e., what is the primary goal of your project design?
- design constraints
- technology matrix (just like in Task X)

You are not required to formalize the specific project until Task 4 when the groups are formed but you should have a pretty good idea of what projects you are interested in by this time. You will be graded on outline of your information gathered, design constraints, desired performance, application and possibly a technology matrix. Unlike Task 2, this task is specific to your project technology.
