

## **Task X**

*Objective: To obtain a technology matrix for all the components that will be used in the robot project.*

In this task, you are required to search for any information regarding the project component which has been specifically assigned to you in class. The information should include:

- what component
- which distributor
- model number/part number
- unit cost
- descriptions, such as dimensions, specs
- website of the distributor, or where you can obtain the components online
- Other contact information of distributor, for example, the address

Then, compile all your information and type them accordingly into the Excel spreadsheets (two sheets) provided by instructor. An example is provided in the sheets to guide the process. After completion, send both of the Excel files to [dswoon0@uky.edu](mailto:dswoon0@uky.edu).
