1. 5.4.3, modified. Make all resistor values 15 ohms. Change the values of the current source and voltage source to 2A and 7V, respectively.
2. 5.4-5, modified. Change the reference direction for positive current of the dependent source to the right (flip the arrow around).
3. 5.5-5, modified. Change the value on the independent voltage source to 15V.
4. 5.6-3, modified. Change both of the top resistor values to 500 ohms.
